RESPONSE

Sir:

Responsive to the Office Action mailed May 8, 2001, please consider the following remarks.

REMARKS

In accordance with present invention, there are provided chimeric proteins comprising at least two functional protein units, wherein each functional unit comprises a dimerization domain of a member of the steroid/thyroid hormone nuclear receptor superfamily. The chimeric proteins of the invention can be used in a variety of compositions and methods. For example, the chimeric proteins may be used in compositions and methods for modulating gene expression in cells and organisms; to prepare nucleic acids that encode the chimeric proteins of the invention; to produce protein crystals that are suitable for molecular structural studies,
